

# ONE PLANET PRIVATE EQUITY FUNDS STATEMENT ON CLIMATE-RELATED FINANCIAL DISCLOSURES

**Monday 4<sup>th</sup> October 2021, Élysée, Paris** - In alignment with One Planet Sovereign Wealth Funds and One Planet Asset Managers, we collectively support the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD).

As the effects of climate change become more material and have an impact on short, medium and long-term risk assessment, private investment firms believe that they have a critical role to play, alongside government, businesses and the investment community, to support the transition to a Paris-aligned economy. This includes increasing transparency through reliable, comparable and decision-useful climate-related financial information to help understand climate risks and opportunities effectively.

With this commitment, we will work towards addressing material climate change issues in our governance, business strategy and planning, risk management, and metrics and targets, thereby facilitating the alignment of investment practices with the One Planet Sovereign Wealth Funds (OPSWF) Framework. We will also encourage investee companies to support the TCFD recommendations.

We will continue to engage with the One Planet Sovereign Wealth Funds and other financial, corporate, regulatory and government leaders to support the adoption of international standards for climate-related financial reporting and work towards integrating this data into our investment processes where appropriate within our investment mandates and the OPSWF Framework.
