One Planet Asset Managers Statement

In July 2018, the founding members of the One Planet Sovereign Wealth Fund Working Group (consisting of six sovereign wealth funds), published the One Planet Sovereign Wealth Fund Framework setting out three principles to accelerate the integration of climate change analysis into the management of large, long-term and diversified asset pools.

- **Principle 1: Alignment** - Build climate change considerations, which are aligned with the SWFs' investment horizons, into decision-making.
- **Principle 2: Ownership** - Encourage companies to address material climate change issues in their governance, business strategy and planning, risk management and public reporting to promote value creation.
- **Principle 3: Integration** - Integrate the consideration of climate change-related risks and opportunities into investment management to improve the resilience of long-term investment portfolios.

Today we announce that eight global asset managers have founded the One Planet Asset Managers Initiative to support the members of the OPSWF in their implementation of the Framework. We commit to actively collaborate within the OPSWF Framework and to engage with other key actors, including standard setters, regulators and our broader industry to further the objectives set out in the Framework. Our goal is to advance the understanding of the implications of climate-related risks and opportunities within long-term investment portfolios through sharing of our investment practices with the members of the OPSWF and publication of relevant research.

The Founding Members of the One Planet Asset Managers Initiative include Amundi, BlackRock, BNP Paribas Asset Management, Goldman Sachs Asset Management, HSBC Global Asset Management, Natixis Investment Managers, Northern Trust Asset Management, and State Street Global Advisors.
